

Cable Measuring Guide

Barrel Size 3.5mm or 6mm

Total cable length

Outside cable length

Tail length is B minus C

Cable Measuring Guide Tips

1. Total cable length of the old cable can be shorter than the new cable but not longer.
2. Barrel size is measured at the ends across the diameter of the barrel face. ● 3.5mm ● 6mm
3. Cable is best measured on its own without the handle.
4. If ordering the cable with a handle, just use cable size to order in the website 'handles with cables' category.
5. D handles have 2 sizes, approximately 79mm and 123mm tails. Take the total length of the cable including the handle minus the outer cable to confirm size.
6. Measurement can be approximate, within 5mm to find the correct cable size.
